

Vecima Networks Case Study

Vecima Background

Vecima Networks is a Canadian company that develops hardware and software for broadband access, content delivery, and telematics, where legacy ERP was Microsoft Dynamics GP

Business Challenge

- Vecima's Strong business growth and ageing business platform required a new business applications platform.
- Delayed Month Ends
- Inventory Utilization

Proposed Solution

- Grismo streamlined the month-end process by automating reconciliations, integrating systems, and standardizing reporting to reduce manual effort and close faster.
- Development of Integrations to automate the Processes within Manufacturing, O2C track.
- RMCS Implementation

Business Impact

- Stabilizing the closure of Month and Year End for Vecima which was a major pain point.
- Reducing the manual approach by 40% by automating the processes via Rest API approach.
- Ease in taking daily decision due to the complex OTBI and BI Reports developed by Grismo Team.
- Grismo's effective work arounds in standardizing the Revenue Management System reduce the manual efforts by 70%
- Grismo's suggested RMA process approach helped Vecima in tracking the products effectively and identifying the defaulters in an effective way.
